

Applications

AUTOMOTIVE APPL CAT ON ELECTRONIC WEIGHER STATIC APPLICATION

Static charges on a weigher cause some problems like unpleasant operator?s shocks, data and indicator errors, fault weight of the material and changing weight of the material. Because, dust and particules adding to the material change the weight if you use labratory weigher.

If **H&O Antistatic** bars are positioned to the right place, they provide effective ionization. Therefore, when the products are put onto the weigher, the bars neutralize them.
