

Applications

TEXT LE APPL CAT ON IRONING SANFOR MACHINE STATIC APPLICATION

In ironing sanfor machines, cloth is charged with electrostatic because of the frictions on pulling cylinder and hot ironing on felt. High static electric current can cause stopping of machine continuously for short periods because of tangling of cloth to the cylinder, operator to be electrically shocked, machine's electronic hardware to be harmed. This will create an undesired situation.

For solution of this problem, H&O anti-static bars are installed at both surfaces of the product as seen in the figure, it will neutralize the static electric charge on the surface of the product and it will increase protection and efficiency of the operator.
