TEXT LE APPL CAT ON SARDON MACHINES STATIC APPLICATION

In Sardon Machines, during the processes made for feathering out the cloth surface, static electric accumulates. It should be considered that static charge on the surface can cause cloth particles to stick on surface, operator to be electrically shocked, electronic hardware of the machines to be harmed which will generate an undesired condition.

For solution of this problem, H&O anti-static bars are installed at both surfaces of the product as seen in the figure, it will neutralize the static electric charge on the surface of the product, accelerate the flow and it will increase protection and efficiency of the operator.
